Exam : **E_HANAAW_17**

Title : SAP Certified Development
Specialist - ABAP for SAP HANA
2.0

Vendor : SAP

Version : DEMO

NO.1 What are the advantages of column based tables? (3 correct answers)

- A. Better Compression
- B. Faster Data Access
- C. Better parallel Processing
- D. Bigger Data Set

Answer: A,B,C

NO.2 You create a check variant in the Code Inspector which includes the check 'Search problematic Select * statements'. SAP HANA is used as the db In the check parameters, which value would you use for the percentage of fields that are effectively used?

Please choose the correct answer.

- A. A lower value than on a traditional, row-store only based database
- B. A higher value than on a traditional, row-store only based database
- C. A value that you calculate based on the number of tables
- D. The same value as on a traditional, row-store only based database

Answer: A

NO.3 DB-Specific Properties that allows switching between storage types when running on an SAP HANA database. What are these storage types? There are 2 correct answers to this question.

- A. Column store
- B. Technology store
- C. Row store
- D. Development Store
- E. Re-use component store

Answer: A,C

NO.4 Which of the following repository object can you edit only in ABAP Development tools in Eclipse and not in the Classical ABAP workbench?

There are 3 correct answers to this question.

- A. Core Data service (CDS) view
- B. ABAP program containing new Open SQL
- C. External view
- D. Full-text index
- E. Database procedure proxy

Answer: A,C,E

NO.5 Which code-to-data capability is responsible for the Optimizations & Translation of "Open SQL SELECT FOR ALL ENTRIES clauses into native SQL?. Please choose the correct answer.

- A. HANA Specific features
- B. Transparent Optimizations
- C. Buffer system Optimization
- D. Database Optimization

Answer: B

NO.6 What is an attribute view and what are its practices? There are 3 correct answers to this question.

- A. May contains flow charts
- B. May contain filters
- C. Used to join tables
- D. Used in diagrammatic Projections
- E. May use in calculation views

Answer: B,C,E

NO.7 What are the benefits of using the SQL Monitor (transaction SQLM)? There are 2 correct answers to this question.

- A. It collects monitoring data asynchronously without additional database interaction.
- B. It can be active in a production system with minimal performance overhead.
- C. It schedules ABAP programs to monitor and log all database accesses.
- D. It displays the database execution plan for all SQL statements.

Answer: A,B

NO.8 How can you check if Core Data Services (CDS) views with scalar input parameters can be used in Open SQL queries in your system?

- A. Perform a static code check using the FUNCTIONAL_DB variant.
- B. Use the static method use_features of class cl_abap_dbfeatures.
- C. Check the value of the ABAP system field sy-cdsfeatures.
- D. Check the Open SQL statement in the Explain SQL Statement transaction (SDBE).

Answer: B

NO.9 Which system schema/user is the owner of all the activated objects?

- A. _SYS_XS
- B. _SYS_BI
- C. _SYS_REPO
- D. _SYS_BIC

Answer: C

NO.10 What allows you to resolve errors quickly or warnings reported about the code? Please choose the correct answer.

- A. ABAP debugger
- B. Quick Fix
- C. Debug perspective
- D. Code execution

Answer: B

NO.11 What are the features associated with ABAP CDS? There are 3 correct answers to this question.

- A. Update
- B. Export
- C. Read
- D. Distribution
- E. Create

Answer: A,C,E

NO.12 You want to debug an ABAP program using ABAP development tools (ADT). How do you launch the debugger? Please choose the correct answer.

- A. Create a debug configuration for the ABAP application and run the program
- B. Choose the debug as option in the context menu of the ABAP program
- C. Choose the Run --> Debug options in the menu
- D. Set a breakpoint in the ABAP program and execute the program

Answer: D

NO.13 According to the performance analysis recommendations; which steps are recommended after doing a database migration to SAP HANA?

- A. Activate your ABAP custom coding, which was deactivated before the database migration, using U transaction SFW5.
- B. Switch the storage type of you custom database tables to column store and use the database utility (SE14) to perform the database table conversion.
- C. Perform regular performance scans on the ABAP coding delivered by SAP as part of your development process.
- D. Perform regular performance scans on your ABAP custom coding as part of the development process.

Answer: D

NO.14 Which of the following option is not the main capability of SAP BusinessObjects Analysis for OLAP? Choose the correct answer

- A. Swap axes
- B. Insert filter components
